

SUPPLIER RELATIONS POLICY

Suzano Papel e Celulose S.A. believes that suppliers are partners of critical importance to the sustainability of its business. As such, it strives to maintain supplier relations based on trust and mutual respect, while valuing dialogue, ethics and transparency, encouraging an environment of mutual learning and fostering innovative solutions and sustainable results.

Supported by meticulous selection and certification processes, we prioritize suppliers that are aligned with our policies for occupational health and safety, labor compliance, socio-environmental practices and respect for human rights, as well as with our policies to support, encourage and uphold anti-corruption practices.

We adopt robust supplier management processes that consider legal compliance, economic and financial qualification, legal security and labor compliance and that incorporate performance assessments and risk monitoring to help ensure Suzano's results, strategies and planning.

We clearly and objectively communicate our intentions and goals in our public bidding processes and commercial agreements and contracts so that suppliers are perfectly capable of assessing the inherent business risks and of incorporating the findings in their decision-making.

We participate in and foster the development of the regions where we operate by organizing forums and commercial events, creating opportunities and conducting initiatives to support, orient and train local partners, while encouraging them to adopt global sustainability and supplier practices.

With a focus on regional development, we also undertook a commitment to use local partners defined as *hyposufficient*, i.e., micro and small companies from the manufacturing, retail and services sectors with supply scopes that meet Suzano's contracting needs, with low adaptability to financial variations and that are located within 100 kilometers from the cities where Suzano's industrial or forest operations are installed.

This policy expresses Suzano's vision with regard to supplier relations, but note that we also constantly seek to optimize our processes and to adopt sustainable initiatives with the potential to impact local communities.
